

Easy selling price maintenance for imported items

You sell some imported items?

The foreign currency price is quite stable?

The local Selling Price [SP] is constantly needing to be amended because of our see-saw exchange rates?

The time to manage this manually is irksome and fraught with dangers?

If the above is true of you then we've got something you will like!

This add-on allows you to add a Foreign Currency price to each stock item that is imported. Whenever the exchange rate changes the local selling price on the Opera II stock master can be updated accordingly via a simple, menu driven batch routine.

We've got the solution:

We call it **"Easy SP Maintenance"**.

- Each imported items has a foreign price [FP] and currency associated to it. Typically this FP could stay stable for years. It is the fluctuating Rand that forces local prices to be frequently amended.
- The exchange rate is held in the standard Opera II Exchange rate file under the system menu option. Additional exchange rate records can be added to ensure that you can apply the rate of choice to the selling price
- You can have any number of exchange rates loaded although each stock item is only linked to one of these at any one time.
- To execute the price changes to the stock master a single menu option is selected. It's as simple as that. It can be run as many times as you like.

Contact us for more info or a FREE trial version!

- Released: October 08
- For all Opera II users who use the stock module and who sell imported items.
- With this add-on you could for example amend the SP of 10 000 stock items in 30 seconds if the Rand were to weaken (or strengthen) against a basket foreign currencies.
- It's very quick.
- It's very accurate
- It's very efficient
- It's makes sense
