

E-Commerce made easy (and cheaper than ever) for Opera II users.

Do you want a 24/7 presence on the web?

Do you want to take orders at the lowest possible cost per order? If 'Yes' then read on.

The concept:

In Opera II you mark customers who can buy and products which can be sold on the web. By means of service running on your server this info is updated to your website every 15 minutes ¹.

Known or anonymous users can access your website, see the products for sale, search for products and place their orders.

The order can be automatically posted into Opera II within 15 minutes as a 'document' where staff progress it once validated. Anonymous users will create a document against a COD account to ensure proper buyer authentication.

Emails keep everyone up to date with the events. For example buyers will receive logins & passwords so that they can track the status of their order.

What's the benefit to you?

- It's robust, needs minimal human intervention and is fast.
- With next to no effort on your part and in no time you can have an e-commerce site silently taking orders. The main pre-requisite is that you have an ADSL line.

Note 1: The update frequency can be set to your requirements.

■ Released: Feb 2010

For all Opera II users who have wanted to sell product via the web but thought it is either too complex or expensive

■ Highly Automated—
Just wait for the orders to roll in.

■ It's very quick to setup.

■ It's cheap

■ It's impressive

■ It increases turnovers

You should consider increasing your turnover the way many others are doing it!!
