

The Flying Stockman—fast stock creation & receiving.

Do you need to create many new stock records regularly?

Would it be useful to create a new stock item and receive stock in one swoop?

Would high speed stock data entry be beneficial to you?

If the above is true of you then we've got something you will like!

This add-on allows you to create parts that don't yet exist in the OPERA II stock module in an incredibly efficient way. This efficiency is achieved by copying details of the previous record and requiring you to edit ONLY the fields that need to be changed. In timed trials a new record can be added in 5 seconds flat.

Simultaneously you can capture the quantity to be received into the new items all in one record. Imagine only capturing the part number once for a stock record creation and a stock receipt? Now that's productive!

We've got the solution:

We call it **"The Flying Stockman"**.

- This program is launched from the Stock Utilities menu.
- The first record has to be captured but many fields are populated via drop down lists to ensure both speed & accuracy.
- Subsequent records copy the previous record and only certain fields need to be changed.
- Stock quantities can be receipted for new parts and for existing items.
- This program is warehouse aware.
- The Opera II Toolkit is required to implement this program.

Contact us for more info or a FREE trial version!

Released: October 08

For all Opera II users who use the stock module and who only use basic aspects of stock.

With this add-on you can capture a new (audit trailed) receipt every 5 seconds.

It's very quick.

It's very accurate

It's very efficient

It's makes sense

**Time saved
here means
time spent
elsewhere!**
