We needed a system where the:

- processes are simple.
- Information is easily accessible.
- Costing of BOMs is continuously updated to latest input prices.

Intelligent Business.

A MANUFACTURING CASE STUDY.

According to MD, Mervyn Cohen:

“We have been users of a Pegasus products for years. Upgrading to Opera II was just a natural progression for us. The continuous addition of impressive functionality over the years gave us confidence that Opera II would serve us well far into the future.”

Our main need was a functional “Bill of Material” module which would accurately & easily cost our paint recipes. Facing endless price changes in SA we needed a system which could manage these frequent price changes & provide us with accurate daily recipe costings.

We checked out several other local & international systems just to satisfy ourselves that Opera II was still all it claimed to be. After researching widely we committed ourselves unreservedly.

Key Speccoats Facts:

10 user Opera II system, 3 remote.
Platform: MS SBS 2003
40 employees across 2 locations

Opera II is modular:

Financials:
