

Opera II—Top Ten User Tips

OPERA II CLIENT INSTALLATION TIP & NEW TECHNOLOGY CAUTION.

.....Client installations for Opera.II.....

After installing a new version of Opera II it is quite a time consuming process to go to each workstation where Opera has been installed as a client and update the client to the latest correct version.

From V6 onwards this has been significantly streamlined. It is no longer a complex process and doesn't need a trained technical person to install the new version of the client.

After your Pegasus Partner has confirmed that the server portion has been properly installed and tested a message can be sent to all Opera II users on your network telling them that they are able to carry on working.

On double clicking on their normal Opera II icon the user will be advised that a new version of client exists and needs to be installed. They are given the option to run the setup program. The process only takes a couple of minutes and they will be up and running without waiting for a specialist to do their client installation. **It saves you time and money.**

Then another short, sane, sensible suggestion:

Most of us love to keep up with technology. And technology progress these days is phenomenal. For example the follow up product to Vista is about to land and small business server 2008 and 64 bit processing is already a reality.

But much of your application software has to be extensively modified to be able to use these new technologies. Our software always gets modified to suit these 'inevitable' platforms but don't rush into buying them before all your application software (Pegasus products included) is confirmed as being compatible with these platforms.

We are not able to support our applications on these platform if Pegasus UK (in the case of Pegasus products) has not announced support for them. We HIGHLY recommend moving up to the newer technology platforms (there are always significant benefits) but only when they are 'supported' by your application software vendors!!!!

Patience in this instance will pay dividends. You will save on time, money and aggravation if you let the dust settle before diving in boots and all. Announcements about supported platforms are always made timeously.

..Move cautiously with new operating systems ...

Pegasus MPower Tip 3 of 10.

▶ 15TH SEPT 2008

▶ NEW VERSIONS

More information helps you use Opera II better which in turn helps the business do better.

Worth a try, we say!

**Easier new version
installations but be
cautious with new
operating systems**
