

pegasus OPERATIONS^{II}

pegasus OPERATIONS II

A total manufacturing solution, now and for the future

Today it is more apparent than ever that business processes must continually evolve and integrate to keep pace with the rapid changes in the way that business is carried out. Manufacturers are becoming increasingly reliant on 32-bit Windows and Microsoft based applications, networking, E-mail and the Internet to meet these business demands. Any system not exploiting these technologies will be quickly surpassed.

For today's manufacturer it is a prerequisite to produce quality products at a competitive price for time-critical and price-driven customers. Pegasus Operations II, the 32-bit business and manufacturing solution from Pegasus Software Limited, not only provides companies with the technology required to remain competitive in today's markets, but also allows them to actively leverage information for real business benefit in order to lead the way in the future.

Pegasus Operations II is a business and manufacturing system based on Microsoft technology. It can support many clients and has the power to provide critical management information as and when required. Because Pegasus Operations II is a re-development of Pegasus Operations, one of the UK's leading manufacturing products, you can be confident that you will be using a powerful and robust solution.

Adaptable to changing business processes

Pegasus has become a leading supplier of manufacturing solutions precisely because it has developed products that adapt to

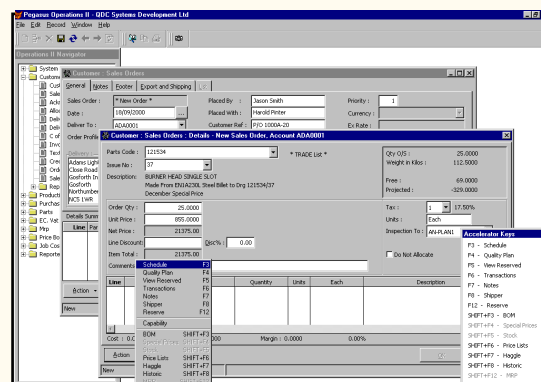

the changing demands of its customers' businesses. Pegasus Operations II is a modular solution so you select the components that match your current business model, as these requirements change you can then add additional functionality. This means that you can expand the capability or capacity of your system while safeguarding your existing investment. This is a seamless operation with minimal disruption to your day-to-day processes.

Pegasus Operations II can add that vital edge to your manufacturing process, allowing you to take early advantage from it, safe in the knowledge that it will grow with you.

Picking the right software is the key to efficient manufacturing

Picking the right software can transform a hectic process, where profitability is on a constant knife-edge, into a more controllable and manageable proposition. Pegasus Operations II is a complete production system that integrates manufacturing management, eBusiness and quality control to the accounting system. Operations II is a modular system that processes data from sales orders through production and MRP, to delivery and invoicing. The profit on jobs can be assessed, purchase invoices matched against goods inward receipts and stock control actively managed.

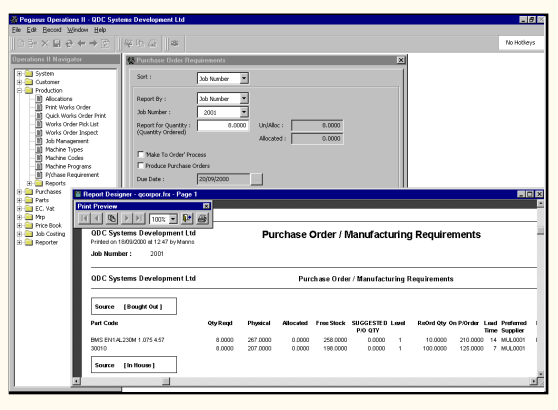

It is important that you can quickly analyse business facts and see developing trends in your company. Such information can enable you to make timely decisions that can have a direct influence on your profitability. Extensive and definable reporting facilities within Operations II allows you to produce reports with the required information for you to act upon. Reports can be concise, to give you a snapshot view, or can be as detailed as necessary.

Integrated Manufacturing and Accounting

Having a modern and powerful accounting system that runs standalone is no longer enough. The Pegasus solution allows you to link the Operations II manufacturing system into our Opera II accounting

package. Integrating the manufacturing system to the accounting system releases the full power that the Pegasus solution can give to your organisation. Integration means that the finance functions need not be divorced from the manufacturing functions. As sales and purchase orders are entered, their ledger accounts are accessed, and if they are outside their trading terms or are on 'stop', the operator is informed. Depending upon the operator's security rights, it is possible to prevent that order from being entered and deliveries being made. Information recorded by the accounts department about that company is available to the order processing personnel. Sales invoices raised and purchase invoices received will automatically be transferred to their accounts in Pegasus Opera II. The Nominal Ledger will be updated with these postings, so ensuring that accurate and up-to-date information is readily available across the system.

eBusiness - Electronic trading made easy

The Pegasus Web Trading solution allows companies to put their sales operation on the Internet with minimum effort. The Web Trading solution is an Internet based Sales Order Processing module that will publish your stock items on the Internet in catalogue format. Orders can then be placed for these items via your web site eStore. Orders are then imported into Operations II without the need to re-key any information. The Pegasus Web Trading solution is a flexible, adaptable, straightforward solution; the perfect way to get your company trading on the Internet. It really does make eBusiness easy.

An impressive breadth of functionality

Multi-company, Multi-currency, Multi-level Bills of Materials - Operations II is a 'multi-everything' package, providing all the functionality a progressive manufacturer requires. This includes, WIP & Shop Floor Management, Sub-contracting, Actual to Standard Time Recording with Variance Analysis, Vendor Rating, Costing, Rapid Searching and definable Management Reports. The solution is also fully E-mail and Internet enabled, provides Web Based Reporting, Price Lists and definable Business Alerts. In addition, the Pegasus Operations II Toolkit enables authorised developers to fulfil any special customer requirements, thanks to the open system that is one of the design principles of Operations II.

To summarise, both Pegasus Operations II and Opera II are compelling products based on a tried and tested foundation. Deploying the latest technologies they address the real issues faced by the order processing, production and finance departments and will help you manage your organisation in today's competitive market.
